This is an office action for serial number 10/822,139.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by applicant's specification in paragraph [0043] through [0044]. The applicant has admitted that active vibration isolation devices may compensate any undesirable characteristics of the passive isolation devices. A known active vibration isolation system comprises active isolation devices and a control system to control the active isolation devices. Such an active isolation system, in particular the control system thereof, may be configured to employ a modal decoupling technique. Modal decoupling is a coordinate transformation, usually from a Cartesian coordinate system, to a modal coordinate system. The modal coordinate system comprises coordinate axes that are orientated in the directions of the natural vibrations of the body concerned. This description

teaches the applicant's claimed invention as prior art and is therefore rejected.

***Response to Arguments***

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

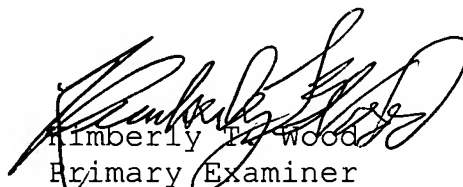

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimberly T. Wood whose telephone number is 571-272-6826. The examiner can normally be reached on Monday-Thursday 7:30am to 5:00pm.
